Arc Length Parametrization Example Problem

Example:

For the following function:

$$\vec{r}(t) = (2t, 3 \sin 2t, 3 \cos 2t), \quad 0 \leq t \leq 2\pi$$

- a. Determine the arc length function
- b. Find the parametrization of the path as a function of the parameter “s”, i.e. $\vec{r}(s)$

Solution
