

Question 11.2

Given the symmetric equation of a line:

$$\frac{x - x_0}{a} = \frac{y - y_0}{b} = \frac{z - z_0}{c}$$

What would happen if $a \neq 0, b = 0, c \neq 0$?

- a. The equation cannot be expressed in symmetric form
- b. “t” does not exist in the parametric form of the equation of “y”
- c. The equation of the line can only be expressed in vector form
- d. The equation will no longer represent a line
